Forensic Audit Findings & Rationale

Executive Summary: Document contains evidence of text tamper.

Spatial Localization: Primary suspicious region detected in the top-center zone (bounding box [x:161, y:27, w:235, h:40], covering 9400 pixels).

OCR Layout Corroboration: Font height (40px) deviates from line average (14.0px); Text baseline sits 11.0px off-axis from line neighbor text

Technical Rationale: The document is classified as FORGED with 94.0% confidence. Forgery type analysis identifies signature artifacts characteristic of Text Tamper. Primary suspicious region detected in the top-center zone (bounding box

[x:161, y:27, w:235, h:40], covering 9400 pixels). Independent OCR layout cross-check directly corroborates tampering: Font height (40px) deviates from line average (14.0px); Text baseline sits 11.0px off-axis from line neighbor text. Both the deep localization mask and DCT compression-discontinuity analysis converge on this area.
