

DocGuard: Forensic Document Analysis Certificate

Automated Deep Multi-Task Forensic Inspection & Tamper Localization

FORENSIC VERDICT	FORGED	CALIBRATED CONFIDENCE	94.0%
DETECTED FORGERY TYPE	Text Tamper	DOCUMENT ORIENTATION	Deskew: 0.0°

Visual Forensic Evidence

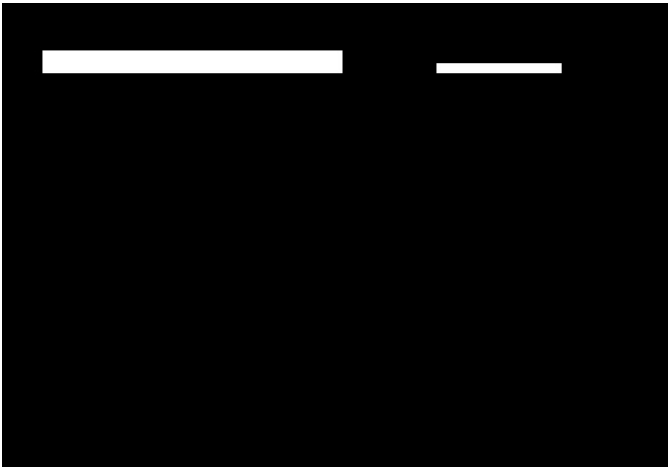

1. Rectified / Enhanced Document

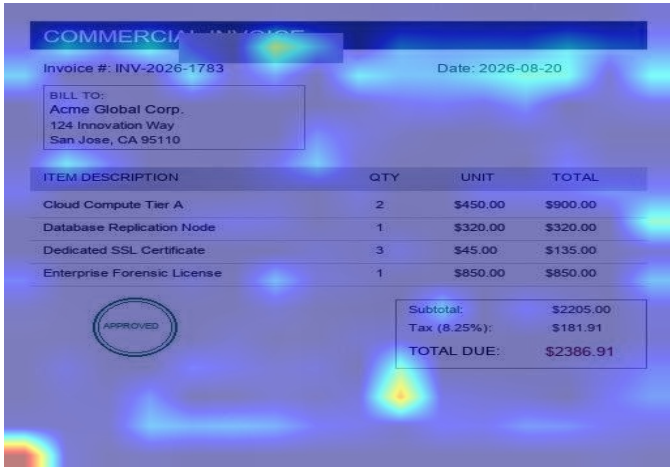

2. Pixel Tampering Localization Mask

3. Binary Segmentation Output

4. Grad-CAM Deep Attribution Heatmap

Forensic Audit Findings & Rationale

Executive Summary: Document contains evidence of text tamper.

Spatial Localization: Primary suspicious region detected in the top-left zone (bounding box [x:31, y:52, w:230, h:25], covering 5750 pixels).

OCR Layout Corroboration: Font height (25px) deviates from line average (18.0px); Font height (11px) deviates from line average (18.0px)

Technical Rationale: The document is classified as FORGED with 94.0% confidence. Forgery type analysis identifies signature artifacts characteristic of Text Tamper. Primary suspicious region detected in the top-left zone (bounding box [x:31,

y:52, w:230, h:25], covering 5750 pixels). Independent OCR layout cross-check directly corroborates tampering: Font height (25px) deviates from line average (18.0px); Font height (11px) deviates from line average (18.0px). Both the deep localization mask and DCT compression-discontinuity analysis converge on this area.
